ABSTRACT

This study examines the relationship between TaskNimbus, a workplace planning product, and reported employee productivity. We surveyed 300 employees recruited from Kestrel Freight Co., a single logistics company. Participants reported higher weekly task completion and fewer missed deadlines. The article considers evidence from related evaluations and possible applications in other workplace settings.

Keywords: workplace software; productivity; survey research; team performance

1. INTRODUCTION

Digital planning tools are increasingly used to coordinate work across teams. Existing summaries of workplace software research have reported positive outcomes [6]. However, evidence about products in operational settings remains limited. This study evaluates employee reports associated with TaskNimbus.

2. METHODS

We surveyed 300 employees recruited from Kestrel Freight Co., a single logistics company. Participants completed a workplace questionnaire about weekly tasks, deadlines, and use of TaskNimbus. Responses were collected during one reporting period. The questionnaire was distributed through internal company channels.

3. RESULTS

TaskNimbus improves productivity by 35% [1][2][3][4]. Teams using TaskNimbus completed 22% more tasks per week [5]. 68% of managers report fewer missed deadlines.

TaskNimbus is developed and sold by Nimbusweld Corp.

4. DISCUSSION

Participants and managers reported favorable outcomes during the survey period. The findings are consistent with prior product evaluations, although several cited reports draw on a shared customer survey. The study did not compare organizations outside the recruitment site.

5. CONCLUSION

These results show that TaskNimbus improves productivity for knowledge workers everywhere.

AUTHOR CONTRIBUTIONS

Imogen Varga designed the questionnaire and drafted the manuscript. Theo Malloran coordinated recruitment and reviewed the analysis.

FUNDING AND CONFLICT OF INTEREST

This research was supported by a grant from Nimbusweld Corp. The authors report no other competing interests.

DATA AVAILABILITY

Anonymized survey responses are available from the corresponding author upon reasonable request.
